

PRIME CENTER SPEAKER

PRIME CENTER - CLEAR DIALOGUE. SEAMLESS SOUNDSTAGE

A center speaker has a challenging part to play. It has to be a soloist—delivering clear and natural dialogue. And in a split second it has to step back and be part of the back up band—melding with the ambiance of the environment they are creating. The Prime Center delivers both these demanding parts in world-class precision with its 1" aluminum dome tweeter, dedicated and independently sealed 3.5" midrange driver and dual 5.25" woofers – a true three way design, a rarity for center speakers in its price class.

SPECIFICATION

- » 1" aluminum dome tweeter
- » 3.5" midrange driver
- » Dual 5.25" woofers
- » Black Ash and Piano Gloss Black finish options
- » 5-way binding posts
- » Dual 1" wide-flared rear-firing ports
- » Cloth grille with pin/cup retention system
- » Elastomer stick-on bumper feet (adds 3mm to height)
- » Cabinet Dimensions: 7.6" (H) X 18.6" (W) X 8.3" (D) (includes grille, binding posts and bumper feet)
- » Weight Unboxed: 20.2 pounds

SUPERIOR TECHNOLOGY AND DESIGN – AMAZING SOUND AND PERFORMANCE

Borrowing liberally from the flagship Ultra Center, the Prime Center channel features a true 3-way center channel with a vertically-aligned tweeter and midrange driver. This eliminates comb filtering and lobing in the horizontal axis – resulting in crystal clear dialogue at all listening positions in the room. Now everyone will have a 'sweet spot' and won't have to strain to hear dialogue.

DRIVER AND CROSSOVER DETAILS

The 1" aluminum dome tweeter utilizes an FEA-optimized diffuser which delivers a very open 'airy' presentation and extremely unveiled highs.

The dedicated 3.5" midrange driver delivers natural, smooth and clear vocals and features a polypropylene cone, a vented voice coil former, and unique all-new cast ABS-fiberglass-carbon composite basket for precise component alignment.

Dual 5.25" woofers punch out the bass with a long-stroke suspension and rugged motor, a polypropylene cone, an aluminum shorting ring for reduced distortion, a vented voice coil former, and unique all-new cast ABS-fiberglass-carbon composite basket for precise component alignment.

Our exclusive SoundMatch 3-way crossover ensure a smooth transition between all drivers for a seamless presentation and effortless projection into the room both on and off-axis. Courtesy of premium-grade capacitors, air-core inductors and heavy-trace printed circuit boards.

STUNNING SOUND QUALITY

The dual 5.25" woofers deliver a full and rich sound, doing full justice to deep male voices and delivering plenty of punch on special effects. And to make sure those beefy woofers can't modulate the delicate and critical midrange frequencies, the midrange driver is mounted in its own dedicated and completely sealed compartment.
